DETAILED ACTION

Response to Amendment

1. This Office Action is responsive to the amendment filed on April 4, 2005. As directed by the amendment, claims 1, 5-7 and 15-20 are canceled, claims 2 and 4 are amended, no new claim is added. Thus, claims 2-4 and 8-14 are presently pending in this patent application with claims 2 and 8 being the independent claims. The specification and drawings are also amended by the amendment. However, the amendment contains the following deficiencies.

2. CLAIMS: Some of the claim identifiers are not correct. For example, “currently unchanged” (claim 3) and “currently allowed” (claims 8-14) are not conformed to the current practice.

3. SPECIFICATION: The changes to the specification are not correct. Reference numerals for safety circuit (60) and switch (62) are added to paragraph 2 of page 9. However, reference numeral 62 is not found/shown in any drawings and reference numeral 60 was used for “rear wall” shown in Fig. 3 and line 15 of page 10.

4. DRAWINGS: The amended drawings (at least Fig. 3 is amended to correct reference numeral 36 to 30) are not labeled as “replacement sheet” (see the objection to the drawings below for current practice). Fig. 2 is different from the originally filed figure (some part is missing). Fig. 4 appears to be the same, but the remarks stated that it is amended.

5. REMARKS: The added information/explanation in the remarks (page 2, third paragraph) concerning the safety circuit and switch in the drawings are new matters without support from the originally filed disclosure.

Art Unit: 2632

6. The headings (e.g., Application/Control Number and Art Unit) of the amendment are not compliant to the current application information.

Drawings

7. The drawings are objected to under 37 CFR 1.83(a). The drawings must show every feature of the invention specified in the claims. Therefore, the safety circuit and the switch (lines 10-11) of claim 8 must be shown or the feature(s) canceled from the claim(s). No new matter should be entered.

Corrected drawing sheets in compliance with 37 CFR 1.121(d) are required in reply to the Office action to avoid abandonment of the application. Any amended replacement drawing sheet should include all of the figures appearing on the immediate prior version of the sheet, even if only one figure is being amended. The figure or figure number of an amended drawing should not be labeled as “amended.” If a drawing figure is to be canceled, the appropriate figure must be removed from the replacement sheet, and where necessary, the remaining figures must be renumbered and appropriate changes made to the brief description of the several views of the drawings for consistency. Additional replacement sheets may be necessary to show the renumbering of the remaining figures. Each drawing sheet submitted after the filing date of an application must be labeled in the top margin as either “Replacement Sheet” or “New Sheet” pursuant to 37 CFR 1.121(d). If the changes are not accepted by the examiner, the applicant will be notified and informed of any required corrective action in the next Office action. The objection to the drawings will not be held in abeyance.

8. The disclosure is objected to because of the following informalities:

Art Unit: 2632

In the specification, paragraph 2 of page 9, the newly added reference numeral “60” for “the safety circuit” was used to described “the rear wall” as shown in Fig. 3 and line 15 of page 10 in the originally filed specification.

Appropriate correction is required.

Claim Rejections - 35 USC § 112

9. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

10. Claims 2-4 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

In claim 2, the claimed limitation “said LED indicator is illuminated when said beam of light is interrupted” is not consistent with the disclosure. Applicant in the specification, lines 28-29 of page 10, wrote that “...the light beam 20 is interrupted, and the LED 26 is extinguished...” which is opposed from the claimed requirement. Clarification is required.

Response to Arguments

11. Applicant's arguments filed April 4, 2005 have been fully considered but they are not persuasive.

Applicant in the third paragraph of page 2 of the amendment stated “The safety circuit - reference numeral 60 – is embedded in the garage door opener motor and controller (34) and is portrayed as such in the amended Figure 4. The switch – reference numeral 62 – would connect the safety circuit (60) and the indicator lamp (30)” which

statement contains new matters not supported by the originally filed disclosure (e.g., specific location of the safety circuit; the specific electrical connection of the switch). In addition, the “safety circuit” and “switch” as claimed in claim 8 are not shown in any of the drawings (reference numerals 60 and 62 are not in the drawings and reference numeral 60 was already used for “the rear wall” in Fig. 3 and line 15 of page 10 and therefore can not be re-used for “the safety circuit”). Figure 4 as provided is not amended as stated.

The 112 2nd problem in claim 2 is recently discovered by the examiner and therefore this office action is made Non-Final.
